Introduction

Welcome to Quizzeria, the innovative digital test platform designed to enhance learning. With subject-specific quizzes aligned with academic curricula, Quizzeria offers a versatile and customizable platform for students, teachers, and administrators. Its user-friendly interface ensures easy access and engagement with educational content, empowering users to adapt and modify quizzes to suit their school's unique requirements.

By utilizing Quizzeria's modern online testing capabilities, teachers effortlessly create quizzes that reflect their teaching materials, reinforcing students' understanding of class topics. Seamlessly integrating technology into the educational journey, Quizzeria revolutionizes testing, bringing convenience and effectiveness to the learning environment. Experience interactive assessments and modern digital methods for tests and exams with Quizzeria, making learning engaging and efficient.

Figure 1: Concept of Quiz Application (Quizzeria)

Aims

The quiz application aims to provide a customizable online testing solution that enhances the learning experience, promotes interactive assessments, revolutionizes online testing by integrating technology seamlessly into education, evaluates student knowledge, tracks progress, and increases teacher efficiency.

Objectives

Figure 2: Objectives

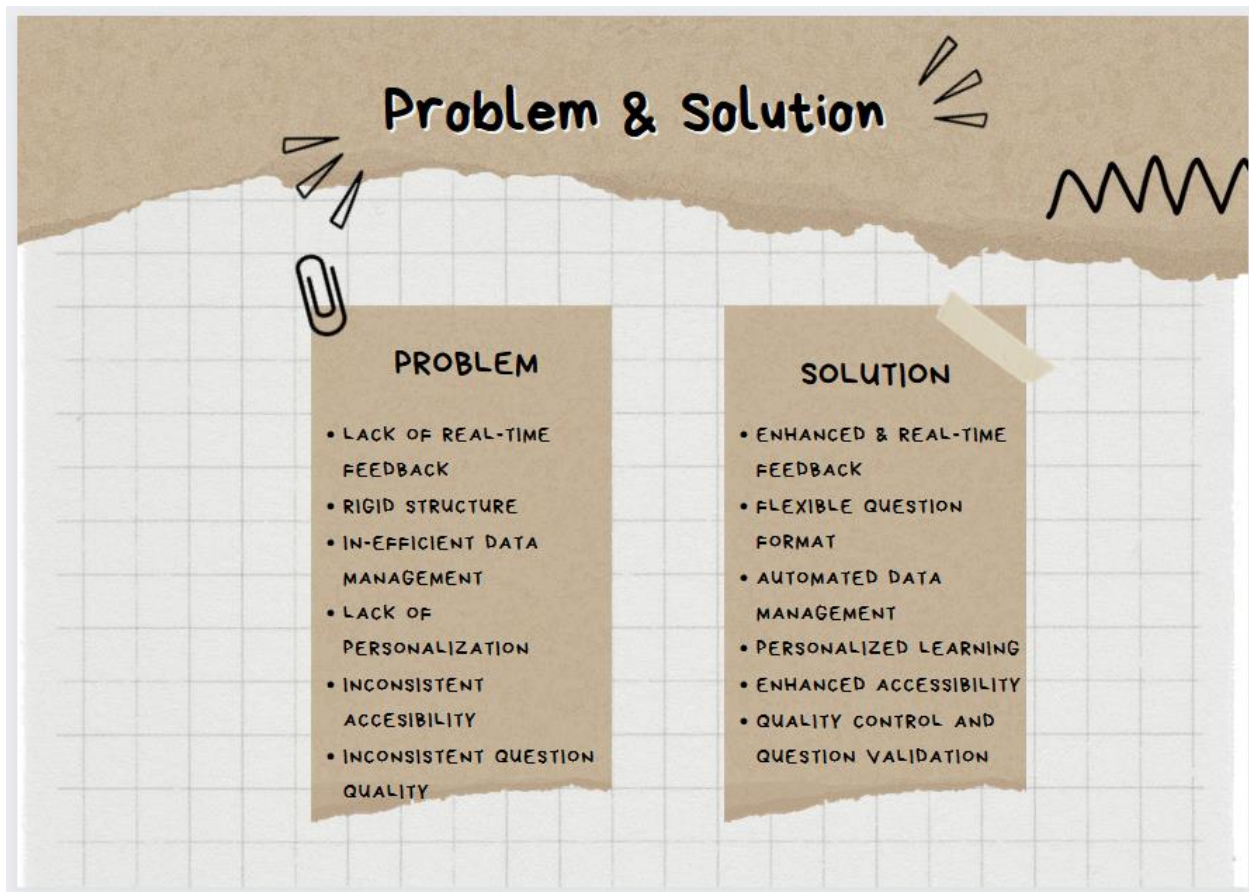

- Develop a user-friendly quiz application for convenient testing and examination.
- Implement an efficient database system for seamless storage and retrieval of quiz data.
- Provide customizable quiz creation and modification options for educators.
- Incorporate robust tracking and assessment features for personalized learning experiences.
- Replace traditional test taking methods with an effective digitalized system.
- Generate reports for analysis and evaluation based on user-selected criteria.

The academic objective is to create a practical quiz application using Java and database systems, with an intuitive user interface and robust database structure. It focuses on teamwork, object-oriented programming proficiency with Java, and Agile Methodology.

Problem Statement

Traditional quiz methods present challenges such as limited feedback, rigid structures, and inefficient data management, hindering personalized learning and progress tracking. A modern quiz application is needed to address these limitations and enhance the learning experience ([Nguyen, 2022](#)).

Figure 3: Problem Statement and Solutions

Quizzeria is a modern quiz app that addresses the limitations of traditional methods. It offers customizable quizzes, intuitive interface, and efficient data management. Educators create tailored quizzes for personalized learning. The integrated database enables progress tracking and performance analysis. Quizzeria optimizes assessments and promotes interactive learning.

Features

The main features of Quizzeria are:

- Implement secure login and registration for user data protection.
- Provide a platform for quizzes, tests, and exams with features like progress tracking, randomized questions, and time limits.
- Enable smooth navigation through questions during assessments.
- Facilitate easy creation, deletion, and updating of questions by teachers.
- Store user scores in a database for convenient tracking.
- Scale the system efficiently.
- Allow users to view and edit personal information.
- Provide grades in both softcopy and hardcopy formats.

These are the main features, but additional features may/may not be added in the future according to stakeholder and product owners' needs.

Functional Requirements

Functional requirements are the features and functions that the Quiz Application must have, they are as follows:

1. User Registration

Allows users to create an account by providing their first name, last name, role, username, email, and password, enabling them to access the Quiz Application.

| | |
|----------------------|--|
| Use Case Name | User Registration |
| Precondition | None |
| Basic Path | <ol style="list-style-type: none">1. User visits registration page.2. User enters their credentials.3. Application validates information.4. If valid, account is created and details stored securely.5. User receives confirmation and is redirected to login. |

2. User Login

Enables users to securely log in to their registered accounts using their credentials, granting them access to the Quiz Application.

| | |
|----------------------|--|
| Use Case Name | User Login |
| Precondition | The user must have a registered account in the Application and should be on login page. |
| Basic Path | <ol style="list-style-type: none">1. User enters username/email and password. |

| | |
|--|---|
| | <ol style="list-style-type: none"> 2. Application verifies credentials against stored data. 3. If valid, user gains access based on role. 4. If incorrect, user is prompted to re-enter correct information. |
|--|---|

3. User Profile Management

Allows users to view and update their profile information, such as email, and password, and other information to personalize their experience.

| | |
|----------------------|--|
| Use Case Name | User Profile Management |
| Precondition | The user must be logged in to the Quiz Application. |
| Basic Path | <ol style="list-style-type: none"> 1. The user navigates to their profile page. 2. The user can view and edit their profile information such as name, email, and other relevant details. 3. The user makes the necessary changes and saves the updated profile information. |

4. Quiz Creation and Management

Provides teachers with the ability to create quizzes by specifying quiz details, adding questions, and managing existing quizzes.

| | |
|----------------------|-------------------------------------|
| Use Case Name | Quiz Creation and Management |
|----------------------|-------------------------------------|

| | |
|---------------------|--|
| Precondition | The user must be logged in to the Quiz Application with appropriate permissions. |
| Basic Path | <ol style="list-style-type: none"> 1. User accesses quiz creation page. 2. User adds details for quiz (title, questions, options). 3. User saves quiz, adding it to available quizzes. 4. User can edit existing quizzes from the list. 5. User can delete quizzes from the list. |

5. Quiz Taking

Enables users to participate in quizzes, answering questions and progressing through the quiz, test or examination until completion.

| | |
|----------------------|--|
| Use Case Name | Quiz Taking |
| Precondition | The user must be logged in to the Quiz Application. |
| Basic Path | <ol style="list-style-type: none"> 1. User selects quiz from available quizzes. 2. User starts quiz, presented with first question. 3. User submits answers for current question, proceeds to next question. 4. User submits answers for current question, proceeds to next question. 5. Process continues until all quiz questions are completed or time limit is reached. |

6. Randomized Questions

Randomizes the order of questions presented to users during a quiz, ensuring a unique and varied experience for each participant.

7. Grading

Automatically evaluates user responses to questions, calculates scores or percentages, and determines the correctness of answers.

| | |
|----------------------|--|
| Use Case Name | Grading |
| Precondition | The user must complete a quiz. |
| Basic Path | <ol style="list-style-type: none">1. Application compares user's quiz answers to correct answers.2. Application calculates score or percentage based on answer correctness. |

8. Result and Analytics

Displays the results to users, including scores, performance data and if they passed or failed.

| | |
|----------------------|--|
| Use Case Name | Result and Analytics |
| Precondition | The user must have completed a quiz. |
| Basic Path | <ol style="list-style-type: none">1. After the user completes a quiz, the application displays the result, including the score or percentage achieved. |

| | |
|--|--|
| | <ol style="list-style-type: none"> The user can view their performance statistics, such as the number of correct/incorrect answers and if the user passed or not. |
|--|--|

9. Account retrieval

Allows users who have forgotten their login credentials to recover their account by providing the necessary information and following the account retrieval process.

| | |
|----------------------|---|
| Use Case Name | Account Retrieval |
| Precondition | The user must have previously registered an account in the Quiz application. |
| Basic Path | <ol style="list-style-type: none"> User accesses account retrieval page or selects "Forgot Password". User provides username and new password. Application verifies information and checks for matching accounts. Account is reset with new password if information is valid. |

10. Printing Results

Provides users with the option to generate a printable version of their quiz results.

| | |
|----------------------|---|
| Use Case Name | Printing Results |
| Precondition | The user must have completed a quiz. |

| | |
|-------------------|--|
| Basic Path | <ol style="list-style-type: none"> 1. User completes a quiz and navigates to the score page. 2. User selects desired score and clicks on the print option. 3. Application generates a printable version of the quiz results, including score, percentage, and user details. 4. Printable results are displayed or downloaded as a PDF or other printable format. |
|-------------------|--|

11. Delete Account

Enables users to permanently remove their account and associated data from the application's database, discontinuing their access and usage.

| | |
|----------------------|--|
| Use Case Name | Deleting Account |
| Precondition | The user must be logged in to the Quiz Application. |
| Basic Path | <ol style="list-style-type: none"> 1. User goes to account profile page. 2. User selects the delete account option. 3. Application prompts user to confirm the account deletion. 4. If confirmed, the application initiates the account deletion process. 5. User's account and associated data are permanently removed from the Quiz Application's database. |

12. Error Handling

The error handling functionality enables the application to handle errors gracefully, such as invalid login credentials or lost database connection. An error message with relevant information or instruction is displayed to the user in these cases.

Non-Functional Requirements

Non-functional requirements specify constraints and expectations for a quiz applications' performance, security, usability, and reliability, ensuring an effective and user-friendly experience ([Editor, 2020](#)).

➤ **Performance:**

The application should have fast response times and handle large userbase, allowing users to navigate and interact with quizzes without significant delays or performance issues. This could include specifications for powerful servers, effective database architecture, and performance-enhancing system modifications.

➤ **Scalability:**

The application should be able to handle increasing numbers of users and quizzes without compromising performance or functionality.

➤ **Usability:**

The application should have a user-friendly interface, making it easy for the users to navigate, create quizzes, and take quizzes without encountering confusion or difficulties.

➤ **Reliability:**

Users should always be able to access the system, and downtime should be kept at a minimum. This could entail specifications for redundant servers and backup systems, along with safeguards against data loss or system malfunctions.

➤ **Compatibility:**

The application should be compatible with various devices and operating systems, allowing users to access and use the application on their preferred platforms.

➤ **Maintainability:**

The application should be easy to maintain and update with a well-organized codebase and documentation.

➤ **Security:**

The application should ensure the confidentiality and integrity of user data, implementing appropriate measures to protect against unauthorized access or data breaches [\(CrowdStrike, 2023\)](#).

➤ **Data Persistence:**

The data persistence functionality ensures that the information entered by the users, quiz questions and scores, would be stored in a database so that it can be accessed and used by the application even after the application has been closed [\(Pfeil, 2010\)](#).

Scope of Project

The scope of the quiz application project encompasses the development of a comprehensive and user-friendly platform with the use of Java's GUI library Swing, that enables students and educators to engage in a digitalized way of taking tests and examination. The application will include features such as quiz creation, customization, and management, allowing educators to tailor quizzes according to specific subject requirements. Students will have the ability to participate in quizzes, track their progress, and receive timely feedback and results. The application will also incorporate a secure login and registration system, ensuring the privacy and confidentiality of user information. Additionally, the project will involve the implementation of a robust database system for efficient storage and retrieval of quiz data.

Development Methodology

Figure 4: Agile Methodology

Agile is an adaptable software development approach that emphasizes collaboration, customer satisfaction, and the ability to adapt to changes in an uncertain environment ([Agile Alliance, 2023](#)). It involves repeatedly developing specific functionalities of a system over a defined period of time before moving on to the next set of functionalities. This iterative development process allows for flexibility and continuous improvement ([Iteration, 2022](#)). It is important to note that this project followed the principles of Agile methodology, which guided the development process and ensured a dynamic and responsive approach to meet the project goals.

Iterative development is a very important aspect of Agile, and was utilized during the development of the quiz application. And it was used for the following reasons:

➤ **Increased Adaptability**

Agile methodology allows teams to respond to changing requirements and market conditions quickly. By prioritizing flexibility and iterative development, Agile enables teams to adjust their plans and deliver valuable features efficiently.

➤ **Superior Product Quality**

Through continuous testing, collaboration, and frequent feedback, Agile ensures that the product meets high-quality standards. By emphasizing early and regular testing, teams can identify and resolve issues promptly, resulting in a superior end product.

➤ **Continuous Feedback for Improvement**

Agile promotes regular feedback loops between stakeholders, customers, and the development team. This constant feedback allows for continuous improvement and ensures that the product aligns with the stakeholders' needs and expectations.

➤ **Risk Mitigation**

Agile methodologies, such as Scrum, employ short development cycles called sprints, which mitigate risks by delivering incremental value. By breaking down the project into manageable iterations, teams can identify and address risks early, minimizing their impact on the project's overall success.

➤ **Customer Satisfaction**

Agile methodologies prioritize customer collaboration and involvement throughout the development process. By incorporating customer feedback and adjusting requirements based on their needs, Agile ensures that the final product delivers value and meets customer expectations, ultimately leading to higher customer satisfaction.

➤ **Enhanced Team Collaboration**

Agile methodologies foster a collaborative work environment, promoting effective communication and teamwork. Through regular meetings, such as daily stand-ups and sprint reviews, team members can share progress, discuss challenges, and align their efforts, resulting in improved collaboration and productivity.

Overall, Agile methodology provides a framework that enables teams to be more adaptive, customer-focused, collaborative, and continuously improving, leading to successful project outcomes

[\(Piyali, 2022\).](#)

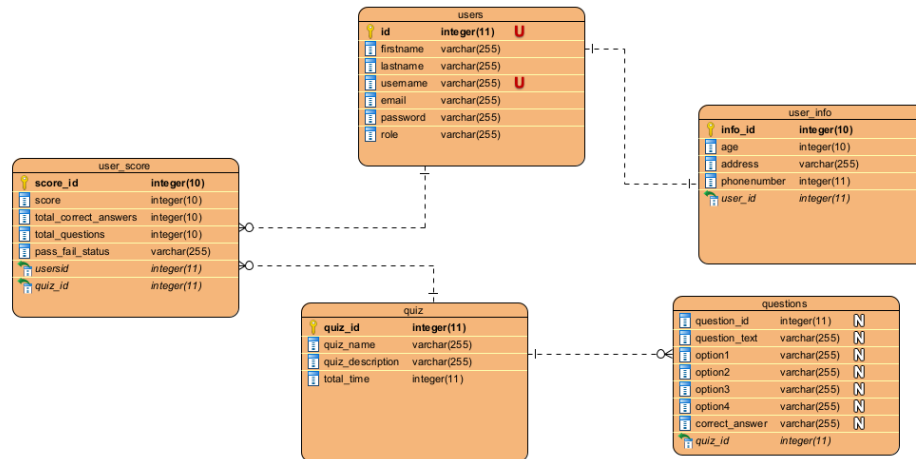

Tools and Technologies Used

Figure 5: Tools and Technologies Used

Conceptual Design

Figure 6: Entity Relation Diagram of Quiz Application

The provided ER diagram showcases the entities and their relationships in the quiz application, including User, Quiz, Questions, Score, and User Details. These entities are connected through strong relationships, defined by foreign keys that establish the associations ([How to Identify a Strong Vs Weak Relationship on ERD?, 2013b](#)). The diagram accurately captures the expected connections between entities, such as the one-to-one relationship between User Table and User Details Table based on a shared `user_id`. Overall, the ER diagram presents a clear and well-structured representation of the quiz application's entities and their relationships, ensuring efficient data management and retrieval.

System Architecture

The quiz application follows a two-tier system architecture, consisting of a client tier (presentation) and a server tier (application and data management) ([Techopedia, 2013](#)). The client tier handles the user interface, displaying quizzes, user information, and facilitating interactions such as answering questions and viewing results. The server tier manages the processing and storage of quiz data, including retrieving quizzes from databases, updating quiz information, and managing user accounts.

Figure 7: Two Tier System Architecture

This architecture enables direct communication between the client and server, ensuring efficient access to quiz information and seamless interaction for users.

Similarly, the quiz application follows a Model-View-Controller (MVC) design pattern, which complements its two-tier system architecture ([GeeksforGeeks, 2023](#)). With the MVC pattern in place,

the application achieves a clear separation of concerns and responsibilities, optimizing its performance and maintainability.

In this design pattern, the Model layer takes charge of managing the quiz data, user accounts, and scoring information. It interacts with the server tier, effectively handling data storage and retrieval operations. The View layer is responsible for presenting quizzes, user interfaces, and feedback to the users. It collaborates with the Model layer to display relevant quiz content and captures user responses. Lastly, the Controller layer acts as the intermediary, orchestrating user requests, facilitating communication between the Model and View layers, and updating the Model based on user inputs.

By adopting the MVC design pattern, the quiz application exhibits several benefits. It enhances code modularity, enabling developers to work on different components independently, simplifying maintenance and future enhancements. The clear separation of concerns also promotes scalability, allowing the application to accommodate additional features and functionalities seamlessly. Moreover, rigorous testing can be performed on each layer individually, ensuring high-quality and bug-free code. Overall, the integration of the MVC pattern within the quiz application ensures a robust, user-centric, and adaptable solution that aligns with industry best practices.

Project Plan

Figure 8: Milestones of the project

| Task Module | Name of Tasks | Start Date | End Date | Duration in Days | Remarks |
|-------------|------------------------------|--------------|--------------|------------------|--|
| Task 1 | Prototype | Apr 19, 2023 | Apr 23, 2023 | 4 | Designing Prototype |
| Task 2 | User Stories | Apr 23, 2023 | Apr 27, 2023 | 4 | Discussion and Completion of User Stories |
| Task 3 | Proposal | Apr 27, 2023 | Apr 29, 2023 | 2 | Project Proposal |

Figure 9: Gantt Chart for quiz application

The project plan for the quiz application is a detailed roadmap that outlines the tasks and timelines for developing the application. The plan includes the following phases:

- Prototyping
- User Stories
- Agile Sprints 1 to 5
- Testing each product Deliverables
- Releasing Deliverables
- Final Product

The plan was further broken down into smaller chunks that align with each other and spans from 19th April 2023 to 9th July 2023, and a progress chart was implemented to ensure the team would stay organized and on track to ensure the completion of the project.

Prototype

Figure 10: Low Fidelity Login Page

A hand-drawn low-fidelity login page prototype. At the top center is a drawing of a graduation cap with the word "Quippta" written below it. Below the logo are three input fields: "Username", "Password", and "Forgot Password?". Below these fields is a rectangular button labeled "login". Below the button is the text "OR". Below "OR" is another rectangular button labeled "Sign up". The entire form is enclosed in a rectangular border.

Figure 12: Low Fidelity Profile Page

The image shows a hand-drawn low fidelity profile page for a website called "Quizzaria". At the top center is a logo consisting of a graduation cap icon and the word "Quizzaria". Below the logo, the page is divided into three main sections. On the left is a vertical sidebar with buttons labeled "LOGO Quizzaria", "My Profile", "Quiz Questions", "Take Quiz", "Your Scores", "All Scores", and "Log Out". The central area is titled "Profile Information" and contains a large rectangular box labeled "PROFILE". Below this box are two buttons: "Edit Email" and "Delete Account?". On the right side, under the heading "Add Information", there are three input fields labeled "Age", "Address", and "Phone Number". Below these fields are two buttons: "Save" and "Edit Password".

Figure 13: Low Fidelity Quiz Selection Page

The image shows a hand-drawn low fidelity quiz selection page for a website called "Quizzaria". At the top center is a logo consisting of a graduation cap icon and the word "Quizzaria". Below the logo, the page is divided into two main sections. On the left is a vertical sidebar with buttons labeled "Quizzaria", "My Profile", "Quiz Questions", "Take Quiz", "Your Scores", "All Scores", and "Log Out". The central area is titled "Take Quiz!" and contains four buttons labeled "Java", "Python", "JavaScript", and "HTML & CSS".

Figure 14: Low Fidelity Quiz Question Page

The wireframe shows a web interface for 'Quizzera'. On the left is a sidebar with a 'LOGO' section containing the 'Quizzera' name and a 'My Profile' button. Below this are buttons for 'Quiz Questions', 'Take Quiz', 'Your Scores', 'All Scores', and 'Log Out'. The main content area is titled 'Quiz Questions' and features a table with the following columns: 'Quiz Name', 'Questions', 'Option 1', 'Option 2', 'Option 3', 'Option 4', and 'Correct Answer'. To the right of the table is a vertical dropdown menu currently set to 'JAVA'. Below the table are three buttons: 'Add Question', 'Edit Question', and 'Delete Question'.

Figure 15: Low Fidelity Quiz Page

The wireframe shows a quiz interface for 'Quizzera'. The sidebar on the left is identical to Figure 14. The main content area displays 'Time : 09:44' and the question: 'What is the correct way to declare a constant variable in Java?'. Below the question are four radio button options: 'final int CONSTANT-VAR = 5;', 'static final int CONSTANT-VAR = 5;', 'const int CONSTANT-VAR = 5;', and 'final constant int CONSTANT-VAR = 5;'. At the bottom of the main area are 'Previous' and 'Next' buttons. On the right side, there is a vertical progress bar labeled '15%' and the text 'YOUR Quiz Progress' at the bottom.

Figure 18: Mid Fidelity Login Page

The image shows a mid-fidelity login page for a website called "Quizzeria". At the top center is a logo consisting of a blue graduation cap with a green tassel. Below the logo is the word "Quizzeria" in a black, sans-serif font. Underneath the name are two input fields: the first is labeled "Username" and the second is labeled "Password". Below the password field is a link that says "Forget Password ?" with a question mark. At the bottom of the form area are two buttons: a dark gray button with the word "login" in white, and another dark gray button with the word "sign up" in white. Between these two buttons is the word "OR" in a black, sans-serif font.

Quiz Questions

| Quiz Name | Question | Option 1 | Option 2 | Option 3 | Option 4 | Correct Answer |
|------------|--|------------------------------------|--|---------------------------------|--|------------------------------------|
| JAVA | What is the purpose of the final keyword? | It makes a variable final. | It ensures that a class is not subclassed. | It defines a constant. | It enables the creation of a final method. | It makes a variable final. |
| JAVA | What is the output of the following code? | 10 | 11 | 12 | 13 | 12 |
| JAVA | Which access modifier is the most restrictive? | public | protected | private | default (no modifier) | public |
| JAVA | What is the correct way to declare a constant? | final int CONSTA | static final int CO | const int CONSTA | final constant int | static final int CO |
| JAVA | Which of the following is a primitive data type? | int | float | boolean | string | string |
| JAVA | What is the purpose of the break statement? | To exit the entire loop. | To skip the current iteration. | To jump to the next iteration. | To terminate the program. | To exit the entire loop. |
| JAVA | What is the result of the following code? | 2.5 | 2 | 3 | 2.0 | 2 |
| JAVA | Which keyword is used to declare a local variable? | new | malloc | alloc | allocate | new |
| JAVA | What is the purpose of the try-catch block? | Same | Different | Error | None of the above | Different |
| JAVA | What is the purpose of the instanceof operator? | To call a method. | To access the current object. | To create a new instance. | To define a variable. | To call a method. |
| Python | What is the correct way to declare a variable? | var x = 5 | x = 5 | int x = 5 | let x = 5 | x = 5 |
| Python | Which of the following is a valid variable name? | _my_var | 1_var | !var | var_1 | 1var |
| Python | What is the result of the following code? | 9 | 14 | 11 | 10 | 11 |
| Python | Which of the following is a mutable data type? | tuple | list | string | dictionary | list |
| Python | What is the purpose of the range() function? | To generate a sequence of numbers. | To concatenate two strings. | To reverse the order of a list. | To convert a value to a string. | To generate a sequence of numbers. |
| Python | Which keyword is used to define a function? | def | function | define | fun | def |
| Python | What is the output of the following code? | 1 | 2 | 3 | Error | 2 |
| Python | What does the sys module do? | Exports a module | Imports a module | Defines a class | Prints a message | Imports a module |
| Python | Which of the following is a data science library? | NumPy | React | Bootstrap | jQuery | NumPy |
| Python | What is the output of the following code? | 5 | 12 | 13 | Error | 13 |
| JavaScript | What is the correct way to declare a variable? | var x = 5 | x = 5 | int x = 5 | let x = 5 | var x = 5 |
| JavaScript | Which of the following is a valid variable name? | _my_var | 1_var | !var | var_1 | 1var |
| JavaScript | What is the result of the following code? | 9 | 14 | 11 | 10 | 11 |
| JavaScript | Which of the following is a primitive data type? | boolean | number | string | tuple | tuple |
| JavaScript | What is the purpose of the break statement? | To get the value of a property. | To create a new instance. | To remove an instance. | To retrieve an instance. | To retrieve an instance. |
| JavaScript | Which keyword is used to define a function? | def | function | define | fun | function |
| JavaScript | What is the output of the following code? | 1 | 2 | 3 | Error | 3 |
| JavaScript | What does the jQuery library do? | Returns the type of a data type. | Compares two values. | Performs a logical operation. | Loops through an array. | Returns the type of a data type. |
| JavaScript | Which of the following is a data science library? | React | Django | Angular | Express | React |
| JavaScript | What is the output of the following code? | 5 | 12 | 13 | Error | 13 |
| HTML & CSS | What does HTML do? | Hyperlinks and Text formatting. | Hyper Text Markup Language. | Home Tool Markup Language. | Hyperlinks and Text formatting. | Hyper Text Markup Language. |
| HTML & CSS | Which of the following is a valid HTML element? | h1 | h2 | h3 | h4 | h5 |

System Testing

Before combining them into a fully working application, unit testing, a type of white box testing, was used to execute a system test for each and every functional component of the program ([Richardson et al., 2020](#)). As indicated in the figures below, it was tested once more after integration to make sure the parts were functioning appropriately and in accordance with expectations.

Figure 44: Test Case Scenario for Login

| Login | | | | | | | |
|--------------|--------------------|--|----------------------------|---------------------------------------|-------------------------------------|-------------------------------------|--------|
| Test Case ID | Test Type | Test Scenario | Precondition | Test Steps | Expected Result | Actual Result | Status |
| TC-001 | Functional Testing | Valid login credentials | User account exists | 1. Open the quiz application URL | Login page is displayed | Login page is displayed | Pass |
| | | | | 2. Enter valid username and password | User is redirected to the dashboard | User is redirected to the dashboard | |
| TC-002 | | Invalid login credentials/Empty fields | | 1. Open the quiz application URL | Login page is displayed | Login page is displayed | |
| | | | | 2. Leave both fields blank and submit | Error message is displayed | Error message is displayed | |
| | | 3. Enter invalid username and password | Error message is displayed | Error message is displayed | | | |

Figure 45: Test Case Scenario for Registration

| Registration | | | | | | | |
|--------------|--------------------|-----------------------------------|--|--|---|---|--------|
| Test Case ID | Test Type | Test Scenario | Precondition | Test Steps | Expected Result | Actual Result | Status |
| TC-001 | Functional Testing | Valid User Registration | User account does not already exist | 1. Open the registration page | Registration page is displayed | Registration page is displayed | Pass |
| | | | | 2. Enter valid first name, last name, username, email, password and confirm password | User details are accepted and saved and success message is displayed | User details are accepted and saved and success message is displayed | |
| TC-002 | | Empty fields in registration form | User account does not already exist | 1. Open the registration page | Registration page is displayed | Registration page is displayed | |
| | | | | 2. Leave all fields blank and submit | Error messages are displayed for fields being empty | Error messages are displayed for fields being empty | |
| TC-003 | | Invalid form field format | | 1. Open the registration page | Registration page is displayed | Registration page is displayed | |
| | | | | 2. Enter any invalid form field, firstname, lastname, username, email, password | Appropriate error message is displayed for each any form field that is invalid and user credentials are not saved | Appropriate error message is displayed for each any form field that is invalid and user credentials are not saved | |
| TC-004 | | Passwords do not match | User account with the same username already exists | 1. Open the registration page | Registration page is displayed | Registration page is displayed | Pass |
| | | | | 2. Enter valid form fields with exception of mismatching confirm password | Error message is displayed when password does not match and user credentials are not saved | Error message is displayed when password does not match and user credentials are not saved | |
| TC-005 | | Username already exists | | 1. Open the registration page | Registration page is displayed | Registration page is displayed | |
| | | | | 2. Enter valid first name, last name, username that exists in database, email, password and confirm password | Error messages are displayed for username already existing | Registration page is displayed | |

Figure 46: Test Case Scenario for Profile Page

| Profile Page | | | | | | | |
|--------------|--------------------|----------------------------|-----------------------------------|---|---|---|--------|
| Test Case ID | Test Type | Test Scenario | Precondition | Test Steps | Expected Result | Actual Result | Status |
| TC-001 | Functional Testing | View User Profile Page | User is logged into the dashboard | 1. Navigate to the user profile page | User profile page is displayed with user's information and a form to add other necessary information if the user wishes | User profile page is displayed with user's information and a form to add/edit other necessary information if the user wishes | Pass |
| TC-002 | | Edit Email Address | | 1. Navigate to the user profile page. 2. Click on the "Edit Email" button. | User profile page is displayed with user's information Email edit form is displayed. | User profile page is displayed with user's information Email edit form is displayed. | |
| TC-003 | | Edit Password | | 1. Navigate to the user profile page. 2. Click on the "Edit Password" button. 3. Enter the current password and a new valid password to save. | User profile page is displayed with user's information Password edit form is displayed. Password is updated successfully. | User profile page is displayed with user's information Password edit form is displayed. Password is updated successfully. | |
| TC-004 | | Delete Account | | 1. Navigate to the user profile page. 2. Click on the "Delete Account" button. 3. Confirm the account deletion. | User profile page is displayed with user's information Confirmation dialog for account deletion is displayed. Account is successfully deleted and user is logged out. | User profile page is displayed with user's information Confirmation dialog for account deletion is displayed. Account is successfully deleted and user is logged out. | |
| TC-005 | | Add Extra User Information | | 1. Navigate to the user profile page. 2. User is able to see form field to add necessary user details 3. Click on the "Save" button. | User profile page is displayed with user's information user is able to enter information into the form fields(e.g., address, phone number). Extra user information is successfully added. | User profile page is displayed with user's information user is able to enter information into the form fields(e.g., address, phone number). Extra user information is successfully added. | |

Figure 47: Test Case Scenario for Quiz Question Page

| Quiz Question Page | | | | | | | |
|--------------------|--------------------|------------------------------|-----------------------------------|---|---|---|--------|
| Test Case ID | Test Type | Test Scenario | Precondition | Test Steps | Expected Result | Actual Result | Status |
| TC-001 | Functional Testing | Create a New Quiz Question | User is logged into the dashboard | 1. Navigate to the quiz management section. 2. Enter the question, options, and correct answer. 3. Click on "Add" button. | Quiz management page is displayed with a list of questions. Able to enter the question, options, and correct answer. Quiz question is created and saved successfully. | Quiz management page is displayed with a list of questions. Able to enter the question, options, and correct answer. Quiz question is created and saved successfully. | Pass |
| TC-002 | | View Quiz Question Details | | 1. Navigate to the quiz management section. 2. User is able to view Question details | Quiz management page is displayed with a list of questions. Verify question, options, and correct answer. | Quiz management page is displayed with a list of questions. Quiz question details are accurate and displayed. | |
| TC-003 | | Update Quiz Question Details | | 1. Navigate to the quiz management section. 2. Click on a quiz question from the list. 3. Modify the question, options, and correct answer. 4. Click on "Edit" button. | Quiz management page is displayed with a list of questions. Quiz question edit form is shown with current data. Quiz question is updated successfully. Quiz Question is saved successfully | Quiz management page is displayed with a list of questions. Quiz question edit form is shown with current data. Quiz question is updated successfully. Quiz Question is saved successfully | |
| TC-004 | | Delete Quiz Question | | 1. Navigate to the quiz management section. 2. Click on a quiz question from the list. 3. Click on "Delete Question" button. | Quiz management page is displayed with a list of questions. Quiz question details are displayed. Quiz question is successfully deleted. | Quiz management page is displayed with a list of questions. Quiz question details are displayed. Quiz question is successfully deleted. | |

Figure 48: Test Case Scenario for Quiz Page

| Quiz Page | | | | | | | |
|--------------|--------------------|---|---|---|---|---|--------|
| Test Case ID | Test Type | Test Scenario | Precondition | Test Steps | Expected Result | Actual Result | Status |
| TC-001 | Functional Testing | View Available Quizzes and Select a Quiz | User is logged into the dashboard | 1. Navigate to the quiz selection page. 2. Verify the list of available quizzes. 3. Click on a quiz from the list. | Quiz selection page is displayed with a list of quizzes. List displays all available quizzes. User is redirected to the quiz taking page for the selected quiz. | Quiz selection page is displayed with a list of quizzes. List displays all available quizzes. User is redirected to the quiz taking page for the selected quiz. | Pass |
| TC-002 | | Take a Quiz - Start Attempt | User is on the quiz taking page for a selected quiz | 1. Verify the quiz details are displayed (e.g., title, duration). 2. Verify the quiz has multiple questions with options. 3. Verify the quiz has "Previous," "Next," and "Submit" buttons. 4. Verify the quiz has a timer counting down. 5. Verify the quiz has a progress bar showing the question progress. | Quiz details (title, duration) are visible. Quiz has multiple questions with answer options. Quiz has the navigation buttons and a "Submit" button. Quiz has a visible countdown timer. Quiz has a progress bar indicating the number of questions. | Quiz details (title, duration) are visible. Quiz has multiple questions with answer options. Quiz has the navigation buttons and a "Submit" button. Quiz has a visible countdown timer. Quiz has a progress bar indicating the number of questions. | |
| TC-003 | | Take a Quiz - Navigate and Submit Attempt | User is on the quiz taking page for a selected quiz | 1. Start the quiz attempt. 2. Answer all questions in the quiz. 3. Navigate through the questions forward or backward to change answers and submit after the last question | Quiz attempt is in progress. All questions are answered by the user. Question is set to previous or next question on click. If the current question is final question, the Next button changes to submit button | Quiz attempt is in progress. All questions are answered by the user. Question is set to previous or next question on click. If the current question is final question, the Next button changes to submit button | |
| TC-004 | | Quiz Attempt - Timer Runs Out | User is on the quiz taking page for a selected quiz | 1. Start the quiz attempt. 2. Wait for the timer to reach zero. 3. Verify that the quiz is automatically submitted. | Quiz attempt is in progress. Timer reaches zero. Quiz attempt is automatically submitted, and score is displayed and saved in database. | Quiz attempt is in progress. Timer reaches zero. Quiz attempt is automatically submitted, and score is displayed and saved in database. | |

Figure 49: Test Case Scenario for Score Page

| Score Page | | | | | | | |
|--------------|--------------------|--------------------------------|---|---|---|---|--------|
| Test Case ID | Test Type | Test Scenario | Precondition | Test Steps | Expected Result | Actual Result | Status |
| TC-001 | Functional Testing | View Quiz Scores for All Users | User with admin privileges is logged in | 1. Navigate to the score management section 2. Score page is displayed with a list of scores. | user is navigated to score page Scores of all users who have taken the quiz are displayed. | user is navigated to score page Scores of all users who have taken the quiz are displayed. | Pass |
| TC-002 | | Update Quiz Score | | 1. Navigate to the score management section 2. Score page is displayed with a list of scores. 3. Click on the "Scores" for a specific quiz. | user is navigated to score page Scores of all users who have taken the quiz are displayed. Scores of all users who have taken the quiz are displayed in the form right next to list of scores. | user is navigated to score page Scores of all users who have taken the quiz are displayed. Scores of all users who have taken the quiz are displayed in the form right next to list of scores. | |
| | | | | 4. Click on the "Update" button for the user's score. | Make necessary changes to the form data of scores and update the score successfully | Make necessary changes to the form data of scores and update the score successfully | |
| TC-003 | | Delete Quiz Score | | 1. Navigate to the score management section 2. Score page is displayed with a list of scores. 3. Click on the "Scores" for a specific quiz. 4. Click on the "Delete" button. | user is navigated to score page Scores of all users who have taken the quiz are displayed. Scores of all users who have taken the quiz are displayed in the form right next to list of scores. The user's score is successfully deleted. | user is navigated to score page Scores of all users who have taken the quiz are displayed. Scores of all users who have taken the quiz are displayed in the form right next to list of scores. The user's score is successfully deleted. | |

Figure 50: Test Case Scenario for User Score Page

| User Score Page | | | | | | | |
|-----------------|--------------------|-----------------------|--|--|--|--|--------|
| Test Case ID | Test Type | Test Scenario | Precondition | Test Steps | Expected Result | Actual Result | Status |
| TC-001 | Functional Testing | View Own Quiz Scores | User must be logged into the dashboard | 1. Navigate to the user score page. | Quiz scores taken by the user are displayed. | Quiz scores taken by the user are displayed. | Pass |
| TC-002 | | View Quiz Details | | 1. Navigate to the user score page. 2. Select the Quiz Score and click on "View Result" button. | Quiz scores taken by the user are displayed. User Quiz Score and other details are displayed | Quiz scores taken by the user are displayed. User Quiz Score and other details are displayed | |
| TC-003 | | Print Own Quiz Scores | | 1. Navigate to the user score page. 2. Click on the "Print Result" button. 3. Click on the "Print" button. | Quiz scores taken by the user are displayed. User Quiz Score and other details are displayed User's quiz scores are displayed in a printable format. | Quiz scores taken by the user are displayed. User Quiz Score and other details are displayed User's quiz scores are displayed in a printable format. | |

Figure 51: Test Case Scenario for Logout

| Logout | | | | | | | |
|--------------|--------------------|----------------|-----------------------------------|--|---|---|--------|
| Test Case ID | Test Type | Test Scenario | Precondition | Test Steps | Expected Result | Actual Result | Status |
| TC-001 | Functional Testing | Logout as User | User is logged into the dashboard | 1. Locate the "Logout" button on the page. 2. Click on the "Logout" button. | "Logout" button is visible and accessible. User is successfully logged out and redirected to login page. | "Logout" button is visible and accessible. User is successfully logged out and redirected to login page. | Pass |

Figure 52: Test Case Scenario for Account Retrieval

| Account Retrieval | | | | | | | |
|-------------------|--------------------|---|--|---|--|--|--------|
| Test Case ID | Test Type | Test Scenario | Precondition | Test Steps | Expected Result | Actual Result | Status |
| TC-001 | Functional Testing | Retrieve Account with Username | User has a valid account in the system | 1. Navigate to the account retrieval page. 2. Enter the valid username and new password associated with the account. 3. Click on the "Retrieve Account" button. | Account retrieval page is displayed with the option to enter a username. Username and password is entered into the appropriate field. Account retrieval process is triggered. | Account retrieval page is displayed with the option to enter a username. Username and password is entered into the appropriate field. Account retrieval process is triggered. | Pass |
| TC-002 | | Invalid Username or Empty for Account Retrieval | User has an invalid username | 1. Navigate to the account retrieval page. 2. Enter an invalid username or a username that does not exist. 3. Click on the "Retrieve Account" button. | Account retrieval page is displayed with the option to enter a username. Invalid username is entered into the appropriate field. An appropriate error message is displayed, indicating that the entered username is invalid or does not exist in the system. | Account retrieval page is displayed with the option to enter a username. Invalid username is entered into the appropriate field. An appropriate error message is displayed, indicating that the entered username is invalid or does not exist in the system. | |

Conclusion

In conclusion, developing a quiz application using Java Swing and MySQL was a great experience for us students. Through this project, we followed Agile methodology, allowing us to work in small increments and make continuous improvements. This approach helped us stay focused on meeting the project requirements and delivering a user-friendly and efficient application.

The system architecture we designed ensured that the application is scalable and easy to maintain. With a well-organized frontend, we created a user-friendly GUI that offered a positive experience for our users. Meanwhile, the backend efficiently handled user inputs, validated them, and executed CRUD operations on the MySQL database.

We prioritized user stories, which served as a guideline to fulfill the needs of our target audience effectively. User stories helped shape the application's features and ensured that it fulfilled its purpose. The user-centric approach allowed us to stay on track and consistently consider the end-users' needs throughout the development process.

As students, this project provided us with invaluable hands-on experience in software development, database management, and GUI design. We expanded our knowledge and skills while working collaboratively as a team. Overall, creating the quiz application was both challenging and rewarding, and it strengthened our problem-solving and programming skills. We are proud of our accomplishment and look forward to applying our newfound skills to future projects.
